WORDPRESS & BLOGGING

Complete Study Notes

Units 1 · 2 · 3

UNIT 1

Blogging Foundations

1.1 The Mindset of a Successful Blogger

Blogging is not just about writing — it is a long-term commitment that demands the right mental attitude. Understanding the mindset behind successful bloggers can make the difference between giving up after three posts and building a platform that lasts for years.

■ Why Mindset Matters

Most bloggers quit within the first six months. The primary reason is not lack of talent or skills — it is the wrong expectations. Successful bloggers treat their blog like a business or a long-term project, not a get-rich-quick scheme.

Core Mindset Principles

- Patience & Consistency: Blog growth is slow at first. Focus on publishing consistently rather than obsessing over traffic numbers.
- Value-First Approach: Always ask 'How does this post help my reader?' Providing genuine value builds trust and loyalty.
- Growth Mindset: Treat failures (low traffic, poor engagement) as data points and learning opportunities, not reasons to quit.
- Long-Term Vision: Think in years, not weeks. Authority and income build gradually over time.
- Authenticity: Readers connect with real voices. Share your personal experiences and perspectives.
- Resilience: Expect algorithm changes, slow months, and criticism. Adapt without abandoning your goals.

■ Daily Habits of Successful Bloggers

- Write daily, even if not publishing — keep the creative muscle active.
- Read widely inside and outside your niche to stay informed and inspired.
- Engage with your audience and community regularly.
- Track key metrics weekly but avoid obsessing over daily fluctuations.
- Set aside time for learning new skills: SEO, design, social media.

Key Insight	Your blog is a reflection of who you are. The most successful blogs have a distinct personality. Write as if you are talking to a single person, not a crowd.

1.2 Content Strategy & Finding Your Perfect Niche

Content strategy is the backbone of a successful blog. It defines what you write about, for whom, how often, and with what goal. Choosing the right niche is the first and most critical decision every blogger must make.

■ What is a Niche?

A niche is a focused topic area that defines the specific subject matter of your blog. Instead of writing about everything, you write deeply about one subject, becoming a go-to resource for that topic.

- Broad Niche Example: Health & Fitness
  - Narrowed Niche Example: Plant-based Nutrition for Busy Professionals
  - Narrowest Niche Example: 15-Minute Vegan Meal Prep for Working Moms

■ The Niche Selection Framework

Step 1 — Identify Your Passions & Knowledge

- List 10 topics you could talk about for hours without getting bored.
- Identify where your professional or life experience gives you credibility.
- Ask: 'Would I still write about this topic even if I earned nothing from it?'

Step 2 — Validate Market Demand

- Use Google Trends to check whether interest in the topic is growing, stable, or declining.
- Check if there are active communities on Reddit, Facebook Groups, or forums related to the topic.
- Look at whether people are buying products, books, or courses on the topic.

Step 3 — Evaluate Competition

- Search your main topic keywords in Google. Analyze the top 10 results.
- High competition means demand exists — do not be scared of it.
- Look for gaps: questions that are not answered well by existing blogs.

Step 4 — Assess Monetization Potential

- Affiliate marketing: Are there relevant products/services with affiliate programs?
- Display ads: Does the niche attract advertisers? (Finance, health, tech pay well.)
- Digital products: Can you sell eBooks, courses, or templates in this niche?
- Services: Can the blog lead to consulting, coaching, or freelance opportunities?

■ What Makes a Good Content Strategy?

- Clear Audience Definition: Know exactly who you are writing for (age, goals, struggles, aspirations).
- Content Pillars: Choose 3–5 core topic categories your blog will cover consistently.
- Editorial Calendar: Plan posts in advance — weekly, monthly, or quarterly.
- Content Mix: Balance informational posts, listicles, tutorials, opinion pieces, and case studies.
- SEO Integration: Build content around keywords your target audience actually searches.
- Content Repurposing: A single blog post can become a video, podcast, infographic, or social post.

✓Pro Tip	The sweet spot for a niche is the intersection of: something you love + something you know well + something people are actively searching for. All three must align.

1.3 Naming & Branding Your Blog

Your blog name and brand identity are the first impressions visitors have. A strong name is memorable, relevant, and positions you clearly in your niche. Branding goes beyond a name — it includes your logo, colors, tone of voice, and the feeling readers associate with your content.

■ Choosing a Great Blog Name

Characteristics of a Great Blog Name

- Easy to spell and pronounce — avoid hyphens, numbers, or unusual spellings.
- Memorable — something readers can recall after hearing it once.
- Niche-relevant — gives a clear hint of what the blog is about.
- Scalable — not so narrow that it limits your future growth.
- Available — check domain name availability (.com preferred) and social media handles.

Naming Approaches

- Your Personal Name: Builds personal brand (e.g., NeilPatel.com). Best for thought leaders.
- Keyword-Based: Directly states the topic (e.g., TheHealthyEater.com). Good for SEO.
- Metaphorical/Creative: Catchy and unique (e.g., Copyblogger, ProBlogger). Requires more branding effort.
- Brandable/Made-Up: Invented words that become iconic over time (e.g., Google, Feedly).

■ Building Your Blog Brand

Visual Identity

- Logo: Simple, scalable, and reflective of your niche's mood.
- Color Palette: Choose 2–3 primary colors. Colors evoke emotions — blue = trust, green = health, orange = energy.
- Typography: Select 2 complementary fonts — one for headings, one for body text.
- Imagery Style: Consistent photo or illustration style across all content.

Brand Voice & Tone

- Define your personality: Are you formal or casual? Serious or humorous? Academic or conversational?
- Write as you speak to your ideal reader — keep it consistent across all posts.
- Your unique perspective is your strongest differentiator.

Remember	Your blog name and brand represent your promise to the reader. Be consistent across your website, social media, email newsletters, and any other platforms you use.

UNIT 2
WordPress — Setup & Customization

2.1 Why You Should Use WordPress for Your Blog

WordPress is the world's most popular Content Management System (CMS), powering over 43% of all websites on the internet. For bloggers, it is the gold standard — flexible, powerful, and supported by a massive global community.

■ WordPress.com vs WordPress.org

Feature	WordPress.com	WordPress.org (Self-hosted)
Hosting	Included (free/paid plans)	You choose your own hosting
Cost	Free to paid ($4–$45/mo)	Hosting (~$3–$10/mo) + free software
Control	Limited	Full control
Plugins	Limited (paid plans only)	50,000+ plugins available
Monetization	Restricted on free plans	Fully open — any method
Custom Domain	On paid plans only	Yes, from day one
Recommended For	Casual/hobby bloggers	Serious bloggers & businesses

■ Key Advantages of WordPress.org

- Open Source & Free: The core software is completely free. No licensing fees.
- Flexibility: Build any type of website — blog, portfolio, store, membership site.
- SEO-Friendly: Clean code structure, permalinks control, and powerful SEO plugins like Yoast.
- Scalability: Works equally well for a brand-new blog and a site with millions of visitors.
- Ownership: You own all your data. No platform can shut you down or delete your content.
- Community: Massive global community for support, tutorials, and resources.

2.2 The WordPress Editor (Block Editor / Gutenberg)

WordPress introduced the Block Editor (codenamed Gutenberg) in version 5.0 (2018). It replaced the Classic Editor with a modern, block-based approach to building content — making it much easier to create visually rich pages and posts without any coding knowledge.

■ Understanding the Block-Based Approach

Everything in the Block Editor is a 'block' — a self-contained unit of content with its own settings. Think of blocks as LEGO pieces you arrange to build your content.

- Paragraph Block: Standard text content.
- Heading Block: H1, H2, H3 etc. for structure.
- Image Block: Insert and align images with captions.
- Gallery Block: Display multiple images in a grid.
- List Block: Ordered and unordered lists.
- Quote Block: Styled pull quotes.

- Table Block: Simple data tables.
- Buttons Block: Call-to-action buttons.
- Video/Audio Block: Embed media directly.
- Cover Block: Full-width image with text overlay.
- Columns Block: Multi-column layout.

■ Key Editor Interface Elements

- Top Toolbar: Save/update, preview, publish button, and settings panel toggle.
- Block Inserter (+): Add new blocks anywhere in the content.
- Block Toolbar: Appears above a selected block — alignment, bold/italic, move, delete.
- Right Panel — Document Tab: Post settings (categories, tags, featured image, visibility).
- Right Panel — Block Tab: Settings specific to the currently selected block.
- List View: Shows all blocks in the post as a collapsible outline (very useful for complex layouts).

Shortcut	Type '/' at the start of a new block to quickly search for and insert any block type. This dramatically speeds up content creation.

2.3 WordPress Pages and Posts

WordPress organizes content into two primary types: Posts and Pages. Understanding the difference is fundamental to structuring your blog correctly.

■ Posts

Posts are the core content type of a blog — they are time-stamped, categorized, and displayed in reverse chronological order on your blog's home or archive pages.

- Time-sensitive and regularly updated content.
- Organized via Categories and Tags.
- Appear in RSS feeds and are indexed for blog searches.
- Can have comments enabled.
- Examples: News articles, tutorials, reviews, opinion pieces, how-to guides.

■ Pages

Pages are static, timeless content that form the permanent structure of your website. They are not displayed in your blog feed.

- Not time-sensitive — content remains relevant indefinitely.
- Can be organized hierarchically (parent/child pages).
- Do not appear in RSS feeds.
- Examples: About page, Contact page, Privacy Policy, Services page, Start Here guide.

Feature	Posts	Pages
Time-sensitive?	Yes	No
In Blog Feed?	Yes	No
Categories/Tags?	Yes	No
RSS Feed?	Yes	No
Comments?	Usually Yes	Usually No

2.4 Customizing Your Post Profile

Each post in WordPress has a rich set of options that go far beyond just writing the content. These settings help with organization, SEO, presentation, and discoverability.

■ Post Settings Panel (Right Sidebar)

Categories & Tags

- Categories: Broad groupings of your content (e.g., SEO, Social Media, Blogging Tips). Every post should belong to at least one category.
- Tags: More specific descriptors (e.g., keyword research, Instagram, content calendar). Tags help users find related content.
- Best Practice: Use 1–3 categories per post and 3–8 relevant tags.

Featured Image

- The main thumbnail image representing the post in blog feeds, social shares, and search results.
- Use high-quality, relevant images (minimum 1200×628px recommended).
- Set consistent dimensions and style for a professional look across your blog.

Excerpt

- A short summary (1–3 sentences) that appears in blog listing pages and search engine results.
- If not manually set, WordPress auto-generates one from the first paragraph.
- Writing a custom excerpt gives you control over how your post is described.

Permalink / URL Slug

- The URL of your post (e.g., yourblog.com/how-to-start-a-blog).
- Best Practice: Keep it short, keyword-rich, and descriptive. Avoid dates and stop words (a, the, of).
- Set this BEFORE publishing — changing URLs after indexing breaks links and affects SEO.

Visibility & Scheduling

- Public: Visible to all visitors (default).
- Private: Only visible to logged-in editors/admins.
- Password Protected: Accessible only with a specific password.
- Schedule: Set a future publish date/time for automated publishing.

2.5 Finding and Installing a WordPress Theme

A WordPress theme controls the visual design and layout of your blog — fonts, colors, header style, sidebar placement, and more. Choosing the right theme shapes your blog's first impression.

■ Free vs Premium Themes

- Free Themes: Available in the WordPress.org theme directory (5,000+). Good starting point, but limited customization.
- Premium Themes: Purchased from marketplaces like ThemeForest, Elegant Themes (Divi), StudioPress (Genesis). More features, better support, professional design.

■ What to Look for in a Theme

- Mobile Responsive: Must look great on phones, tablets, and desktops.
- Fast Loading: Lightweight themes improve page speed and SEO rankings.
- Well-Coded: Check reviews and update history. Regularly updated themes are more secure.
- Plugin Compatible: Especially with WooCommerce (if selling) and SEO plugins.
- Customizable: Header, fonts, colors, and layouts should be adjustable without coding.
- Good Reviews & Active Support: Check WordPress.org ratings and support forums.

■ How to Install a Theme

Method 1 — From the WordPress Dashboard

- Go to Appearance → Themes → Add New.
- Browse or search for a theme. Preview it, then click Install, then Activate.

Method 2 — Upload a Premium Theme

- Download the theme .zip file from where you purchased it.
- Go to Appearance → Themes → Add New → Upload Theme.
- Upload the .zip file, click Install, then Activate.

Caution	Never install themes from unknown third-party sources. Use only the official WordPress repository or reputable premium marketplaces to avoid security vulnerabilities.

2.6 How to Customize Your Theme

Once a theme is installed, WordPress provides tools to personalize it without touching any code. Most customization happens through the WordPress Customizer or a theme-specific page builder.

■ The WordPress Customizer

Access via Appearance → Customize. The Customizer shows a live preview of your site on the right while you make changes on the left.

- Site Identity: Change blog name, tagline, and favicon (site icon in browser tab).
- Colors: Adjust background, header, text, and link colors.
- Header & Footer: Upload a custom logo, set header layout, configure footer widgets.
- Typography: Change fonts for headings and body text (theme-dependent).
- Menus: Create and assign navigation menus to locations (Primary, Footer, Mobile).
- Widgets: Add content blocks (recent posts, search bar, social links) to sidebars and footers.
- Homepage Settings: Choose between a static page or a latest posts feed as your homepage.

■ Page Builders

Many premium themes include a drag-and-drop page builder for advanced customization:

- Elementor: Most popular free/premium builder. Visual, beginner-friendly.
- Divi Builder: Included with Divi theme. Highly flexible.
- Beaver Builder: Known for clean code and speed.
- The WordPress Full Site Editor (FSE): Built-in tool for Block-based themes. The future of WordPress customization.

2.7 WordPress Plugins

Plugins are add-on software that extend WordPress functionality. The WordPress plugin repository has over 59,000 free plugins, and thousands more premium options exist. They add features without requiring any coding knowledge.

■ Installing Plugins

- Go to Plugins → Add New.
- Search for the plugin, click Install Now, then Activate.
- For premium plugins: Upload the .zip file via Plugins → Add New → Upload Plugin.

■ Essential Plugins for Bloggers

Plugin	Category	Purpose
Yoast SEO / Rank Math	SEO	Optimize posts for search engines, manage sitemaps, meta descriptions
Akismet Anti-Spam	Security	Automatically filter spam comments
UpdraftPlus	Backup	Schedule automatic backups to cloud storage
WP Super Cache / W3 Total Cache	Speed	Cache pages to dramatically improve load time
Jetpack	Multi-purpose	Stats, security, CDN for images, social sharing
Contact Form 7 / WPForms	Forms	Create contact and subscriber forms
Smush / ShortPixel	Image Optimization	Compress images without quality loss
MonsterInsights	Analytics	Connect Google Analytics to WordPress dashboard
Social Snap / Social Warfare	Social Sharing	Add share buttons to posts

Plugin Best Practice	Less is more. Each plugin adds code that can slow your site or create conflicts. Only install plugins you truly need, keep them updated, and delete deactivated ones.

2.8 Security and Backups

WordPress security and backups are non-negotiable. A hacked or crashed site without a backup can mean losing months or years of work. Implement a security-first mindset from day one.

■ WordPress Security Essentials

Strong Authentication

- Use a strong, unique password (12+ characters, mix of letters/numbers/symbols).
- Enable Two-Factor Authentication (2FA) using a plugin like Google Authenticator or WP 2FA.
- Change the default admin username from 'admin' to something unique.

Keep Everything Updated

- Update WordPress core immediately when new versions are released.
- Update all themes and plugins regularly — outdated software is the #1 cause of WordPress hacks.
- Delete themes and plugins you are not using.

Limit Login Attempts

- Use a plugin like Limit Login Attempts Reloaded to block brute-force attacks.
- Consider hiding your login page URL from /wp-login.php to a custom URL.

SSL Certificate

- Ensure your site uses HTTPS (not HTTP). Most hosts provide free SSL via Let's Encrypt.
- An SSL certificate encrypts data between your server and visitors, builds trust, and is an SEO ranking factor.

■ Backup Strategy

- Frequency: Daily backups for active blogs, weekly for less active ones.
- What to Back Up: Both your database (posts, settings, comments) AND your files (themes, plugins, uploads).
- Offsite Storage: Store backups in Google Drive, Dropbox, or Amazon S3 — not just on your server.
- Test Your Backups: Periodically restore a backup to verify it works correctly.

Security Rule	A backup is only as good as your ability to restore from it. Test your backup restoration process at least once every few months.

UNIT 3

Content Research & Ideation

3.1 Creation Begins With Consumption

One of the most common struggles for bloggers is running out of ideas. The solution is surprisingly simple: to create great content, you must first consume great content. The best bloggers are voracious readers, viewers, and listeners in their niche.

■ The Consumption-Creation Cycle

Content creation does not happen in a vacuum. Every blog post is informed by what you have read, watched, heard, and experienced. Intentional consumption feeds your creative engine.

- Read industry blogs, newsletters, and research papers in your niche.
- Watch YouTube channels and attend webinars relevant to your topic.
- Listen to podcasts during commutes or exercise.
- Follow thought leaders on LinkedIn, Twitter/X, and other platforms.
- Read books — both directly in your niche and adjacent areas for creative cross-pollination.

■ Consuming with Purpose

Passive consumption is entertainment. Active consumption is research. Train yourself to consume with a question in mind: 'How can I build on this, disagree with this, or explain this better for my audience?'

- Keep a swipe file (folder or notes app) for interesting ideas, angles, and observations.
- Save articles that generate strong reactions — both positive and negative.
- Note questions that arise as you read. Each question is a potential blog post.
- Look for outdated information that you could update with fresh insights.

The Rule	For every hour you spend creating, spend at least 30 minutes consuming. Your inputs determine the quality of your outputs.

3.2 Conducting a Brain Dump

A brain dump is a powerful creative exercise where you empty everything in your mind onto paper (or a screen) without filtering or judging. It is one of the fastest ways to generate a large volume of content ideas in a short time.

■ How to Conduct a Brain Dump

Step 1 — Set the Stage

- Find a quiet space with no distractions. Set a timer for 15–30 minutes.
- Open a blank document, notebook, or whiteboard.
- Have your niche and target audience in mind.

Step 2 — Write Without Filtering

- Write down every blog post idea, topic, question, or observation that comes to mind.
- Do NOT edit, evaluate, or judge ideas as they come. No idea is too obvious or too niche.
- Use prompts if stuck: 'What questions do beginners ask?', 'What mistakes do I see others make?', 'What do I wish I knew when I started?'

Step 3 — Sort and Evaluate

- After the timer ends, review your list.
- Group related ideas into clusters or categories.
- Mark ideas as High Priority (strong SEO potential, high audience interest) or Future Use.
- Aim to get at least 50 raw ideas from a single session. You can refine later.

■ Brain Dump Prompt Categories

- How-to & Tutorials: 'How to [solve problem] for [audience]'
- Lists: 'Top 10 [things] for [audience]', 'X Best [tools/resources/strategies]'
- Comparisons: '[Option A] vs [Option B]: Which is Better?'
- Mistakes & Myths: 'Common Mistakes [audience] Make', 'Myths About [topic] Debunked'
- Personal Stories: 'How I [achieved result] in [timeframe]'
- Trends & News: 'What [recent development] Means for [audience]'
- Beginner Guides: 'The Complete Beginner's Guide to [topic]'

3.3 How Your Existing Audience & Content Can Help You Generate New Ideas

You do not always need to look externally for content ideas. Your existing content archive and your current audience are two of the most valuable — and most overlooked — sources of inspiration.

■ Mining Your Existing Content

Content Gaps Analysis

- Review your top-performing posts. What related topics are NOT yet covered on your blog?
- Look at the comments section — readers often ask questions that hint at new post ideas.
- Update old posts: Take a post from 2–3 years ago and rewrite it with fresh information.

Content Expansion

- Take one broad post and break it into multiple focused posts (content clusters).
- Turn a step in a listicle into its own deep-dive post.
- Create a 'Part 2' or sequel to your most popular content.

■ Mining Your Existing Audience

- Comments: Read every comment on your blog. Questions and complaints are goldmines for post ideas.
- Email Replies: What do subscribers reply to in your newsletters? What questions do they ask?
- Social Media: Monitor what your followers post, ask, and share related to your niche.
- Direct Surveys: Use free tools like Google Forms or Typeform to ask your audience directly what they want to learn.
- Search Queries: If Google Search Console is set up, review what search terms brought people to your site — then write more content targeting those terms.

Best Practice	Set up a simple Google Form and periodically ask your email list: 'What is your biggest challenge with [niche topic] right now?' The responses will keep your content calendar full for months.

3.4 Tool for Content Research: BuzzSumo

BuzzSumo is a powerful content research and social analytics platform that shows you which content topics and formats are performing best on the internet. It helps bloggers discover what content resonates with audiences and what competitors are doing well.

■ Key Features of BuzzSumo

- Content Discovery: Search any topic and see the most-shared articles across Facebook, Twitter, Pinterest, and Reddit.
- Competitor Analysis: Analyze any domain to see their best-performing content.
- Trending Content: Identify what is going viral right now in your niche.
- Influencer Research: Find key influencers and content creators in your topic area.

- Content Alerts: Get notified when new content is published on topics or by domains you follow.
- Backlink Data: See which posts attract the most backlinks — great for link-building strategy.

■ How to Use BuzzSumo for Blog Post Ideas

- Step 1: Enter a keyword or topic related to your niche in the search bar.
- Step 2: Set a date filter (last 6–12 months) to see currently relevant content.
- Step 3: Sort results by 'Total Engagements' or platform-specific shares.
- Step 4: Analyze the titles of top-performing posts — look for patterns in format (lists, how-tos, case studies).
- Step 5: Identify topics with high engagement but limited competition. Write a better, more comprehensive version.

BuzzSumo Strategy	The goal is not to copy what's trending — it is to understand WHY certain content performs well (format, angle, depth) and apply those principles to your own original ideas.

3.5 Tool for Content Research: Ubersuggest

Ubersuggest, created by digital marketing expert Neil Patel, is an SEO and keyword research tool that helps bloggers find content ideas backed by search data. It shows you what people are actively searching for online.

■ Key Features of Ubersuggest

- Keyword Overview: Enter any keyword to see monthly search volume, SEO difficulty, and paid competition.
- Keyword Ideas: Generates hundreds of related keyword suggestions, questions, and prepositions.
- Content Ideas: Shows top-performing blog posts for any keyword — with backlink and social share data.
- Site Audit: Scan your own blog for SEO errors, performance issues, and opportunities.
- Competitor Analysis: Analyze competitor websites to find their top traffic-driving keywords.
- Traffic Estimator: See how much organic traffic any website receives.

■ Key Metrics to Understand

Metric	Meaning
Search Volume	Average monthly searches for this keyword. Higher = more potential traffic.

SEO Difficulty (SD)	Score 0–100. Lower score = easier to rank. Aim for SD < 40 for new blogs.
Paid Difficulty (PD)	Competition in Google Ads. High PD = advertisers value this keyword = monetizable niche.
CPC (Cost Per Click)	What advertisers pay per click. High CPC = potentially high display ad earnings for you.

■ Ubersuggest Workflow for New Bloggers

- Start with your core niche keyword (e.g., 'home gardening').
- Review Keyword Ideas → Questions tab for post ideas phrased as questions.
- Filter results: Volume > 500, SD < 40 for realistic early rankings.
- Note 20–30 promising keywords and build your content calendar around them.

3.6 Tool for Content Research: Quora

Quora is a question-and-answer platform with hundreds of millions of users. For bloggers, it is an extraordinary resource for understanding exactly what questions your target audience has — in their own words.

■ Why Quora is Valuable for Content Research

- Real Questions: People ask Quora because they genuinely could not find the answer elsewhere — making these ideal blog post topics.
- Audience Language: You see how your audience describes their problems in natural language, which improves your writing tone and SEO keyword choices.
- Validation: Questions with hundreds of followers validate that many people share the same curiosity — justifying a full blog post.
- Competitor Gap Analysis: Answers that are short or low-quality represent opportunities for you to write the definitive guide on your blog.

■ How to Use Quora for Blog Post Ideas

- Step 1: Search your niche keyword in Quora's search bar.
- Step 2: Browse the Questions tab. Sort by Most Answered or Most Followed.
- Step 3: Look for questions with many followers but weak or incomplete answers.
- Step 4: Scroll through long, highly upvoted answers — notice what sub-questions arise in comments.
- Step 5: Write a comprehensive blog post that fully addresses the question. You can then post a summary answer on Quora with a link back to your blog.

Additional Quora Strategies

- Follow Spaces: Quora has niche-specific 'Spaces' (like subreddits) — follow spaces in your niche to see trending questions.
- Answer Questions: Establish authority by answering questions in your niche. Include a non-spammy link to a relevant post on your blog.
- Quora Digest Emails: Subscribe to receive email digests of popular questions in your areas of interest.

Combined Power	Use Quora to find what questions people are asking → Ubersuggest to validate search volume for those topics → BuzzSumo to see how top content on those topics is structured. Together, these three tools form a complete content research system.
